Brendan Bailey

Los Angeles CA | brendan.e.bailey@gmail.com | 818-648-4367

Skills

• **Programming:** Python (Pandas, Scikit-learn, Beautiful Soup), SQL, R, HTML/CSS, iMacros, Git
• **Software:** Excel, Access, MySQL, PostgreSQL, PrestoSQL, Airflow, AWS, Google Cloud, Tableau

Professional Experience

Meta (Facebook) **3/2021 – Present**

A social media company with over 3.65 billion users

Senior Data Engineer, Remote

- Tech lead for a team of four data engineers; built monitoring and reporting that mitigated billions in regulatory compliance risk
    - Example: Shipped compliance monitoring under the 2019 FTC Consent Order ($5B penalty)
    - Example: Mentored a junior engineer who built public Reality Labs transparency reporting under the EU Digital Services Act (6% of revenue; ~$12B maximum penalty exposure)
- End to end planning, creation, and maintenance of data pipelines, tables, data quality checks, and other infrastructure critical for launching key companywide initiatives.
    - Example: Created pipelines and reporting that allowed for the launch of Meta accounts and for users to link/unlink their Facebook/Instagram accounts with their Meta Account.
- Lead organizational impact initiatives to make Meta a better company to work for.
    - Example: Created a code review program where team members are paired together on a weekly basis with the purpose of sharing best practices and ensuring only high quality code is pushed.

City of Los Angeles **10/2017 – 6/2020**

Innovation Team in the Office of Mayor Eric Garcetti tasked with critical issues for city of 4 million

Data Scientist, Los Angeles, CA

- Provided analysis to leadership on a variety of policy areas to inform city decisionmakers as well as support our communications with the press.
    - Example: Helped develop the City's COVID-19 pandemic response reporting which was used to brief the Mayor, senior staff, and the public.
- Codeveloped and ran multiple randomized controlled trials (RCTs) to evaluate pilot programs.
    - Example: Formed partnerships with UC Berkeley and the Nobel Prize winning Abdul Latif Jameel Poverty Action Lab (J-PAL) to test the effects of sending behaviorally informed text messages to the city's job center clients. The goal of the study is to see whether these strategies improve the employment outcomes of center clients.
- Developed machine learning models (ML) to help city departments predict key metrics.
    - Example: Created a model to estimate LAPD attrition to better aid the police department in planning their hiring and budget negotiations.
- Engaged the broader data science community to help provide analysis that would address various city issues.
    - Example: Launched a Kaggle competition that engaged the data science community to use natural language processing (NLP) to identify and remove bias from the city's job descriptions.

AFL-CIO **5/2012 – 3/2017**

A 13 million member national political organization that helps elect worker friendly candidates

Membership Data Engineer, Washington, DC **3/2014 – 3/2017**

- Wrote Python scripts and macros to automate the AFL-CIO's team of CRM administrators to do jobs such as user account creation, production of flat files for clients, and data uploads more efficiently.
- Performed audit of client membership files to identify and prevent critical data issues including missing records, incorrectly mapped data, and erroneous entries.
- Developed and administered the AFL-CIO's AWS Redshift data warehouse. The data warehouse served as the backend to their Periscope Dashboards, which helped national and state campaign managers better manage their programs.
- Managed and performed customized development of multimillion-record Oracle database for client organizations' membership data.
- Created reproducible reports and data products for client political directors, other AFL-CIO departments, and vendors to enable better decision making and program operation.
- Worked with client IT directors to enable regular updates of membership data, and enforced data governance policies with vendors and database users regarding client data.

Assistant Voter Database Administrator, Washington, DC **11/2013 – 3/2014**

Enforced data governance policies through approval and denial of requested database extracts.

- Served as escalation point for technical support with CRM database issues for thousands of end users nationwide.
- Performed trainings and webinars to help educate staff and clients on the use of our organization's tech tools.

Nevada Data Coordinator, Las Vegas, NV **5/2012 – 11/2013**

- Developed Python script to facilitate data cleaning of volunteer contact information for manual upload into CRM system.
- Sole, in-state administrator of NGP-VAN CRM system with more than 1.5 Million voter member and volunteer records.
- Gave our State Director and other interested parties data driven recommendations and reports on where to direct resources based on our organizational goals.

Additional Experience

General Assembly **2/2019 – 2/2020**

Education provider that focuses on providing quality tech bootcamps at an affordable price

Data Science Instructor, Los Angeles, CA

- Led multiple one day Data Science Bootcamps that walked students through what is data science, tools used in data science, and data visualization. The bootcamp culminates with students building their first classification and regression models.
- Led multiple one day SQL Bootcamps that taught the basics of SQL such as select statements, aggregation through group by, joins, and subqueries.

Education and Professional Development

MS in Analytics | Georgia Tech | September 2021 to June 2024

Data Science Immersive | General Assembly | March to May 2017

BA in Economics/Political Science | UC San Diego | August 2006 to June 2010
